

Amendments to the claims are as follows:

1. (Currently Amended) A transfective film which is formed between a liquid crystal display panel and an illuminating device for illuminating the liquid crystal display panel from ~~at~~ the backside of the liquid crystal display panel and in which a plurality of fine concave or convex portions is formed on one surface thereof and openings for transmitting light are formed at positions corresponding to pixels of the liquid crystal display panel,

wherein an interval between at least one side of each of the openings and ~~an~~ the edge of each of the pixels is smaller than ~~a~~ the width of one concave or convex portion.

2. (Original) The transfective film according to Claim 1, wherein the interval is set in the range of 0.1 to 5.0 μm .

3. (Original) A liquid crystal display comprising the transfective film according to Claim 1, an illuminating device, and a liquid crystal display panel.
